HIGH MOUNTAINS ARCHIVE

(HMA)

High Mountains Archive began with a real extraction site in Belgium called Hoge Bergen — “High Mountains” — where there are no mountains, but there are deep (clay) pits.

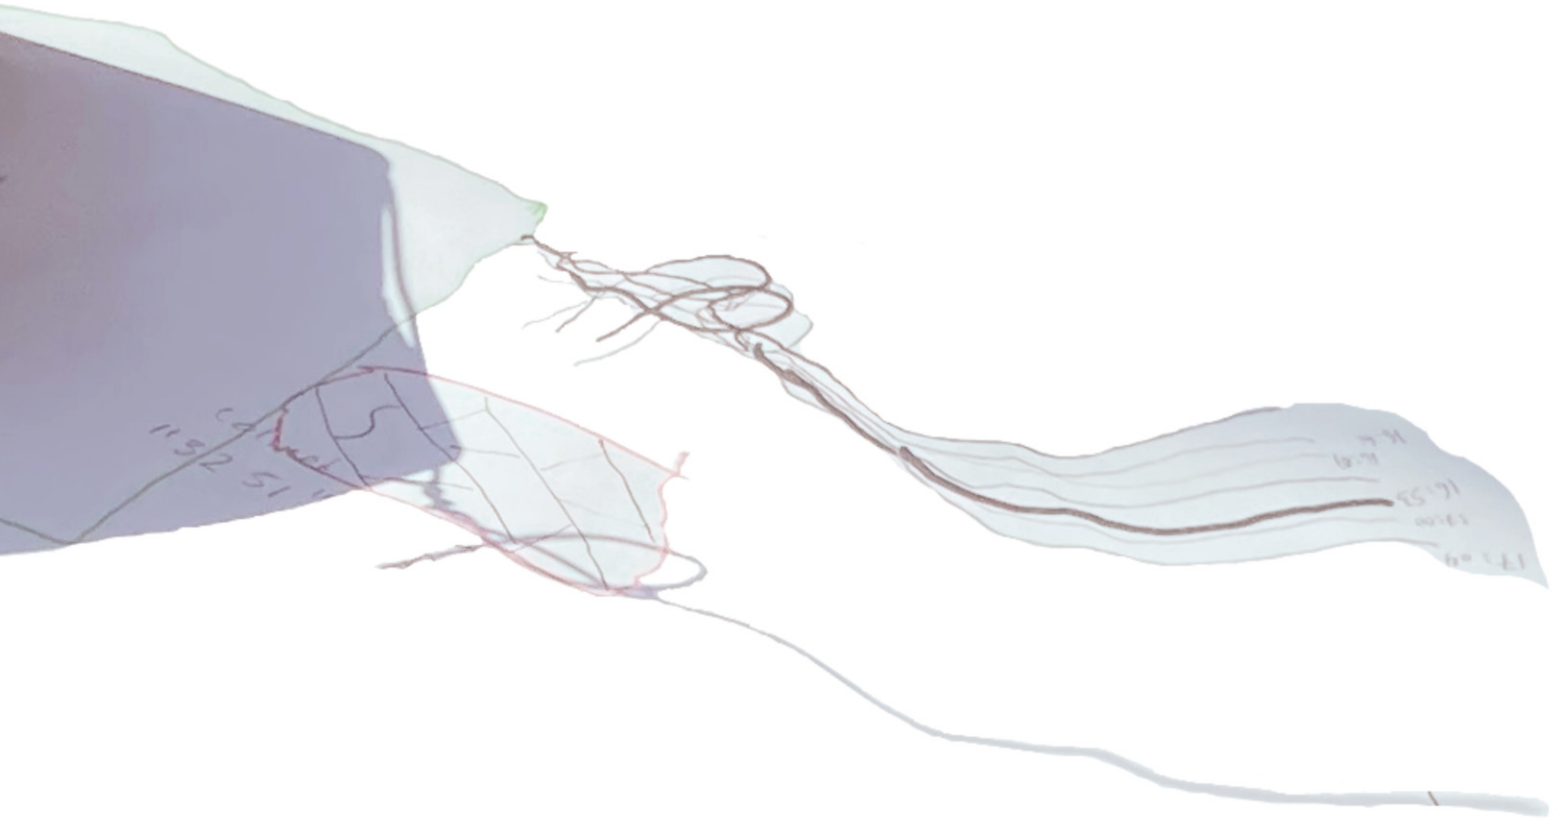

Conceived as an affective archive, the project does not primarily seek to document or represent a site. It develops through partial encounters with materials, traces, histories and transformations.

The relations that emerge extend beyond the geographical limits of a site: materials, industrial processes, histories of extraction and structures of power connect places across territories and different temporalities.

Compacities

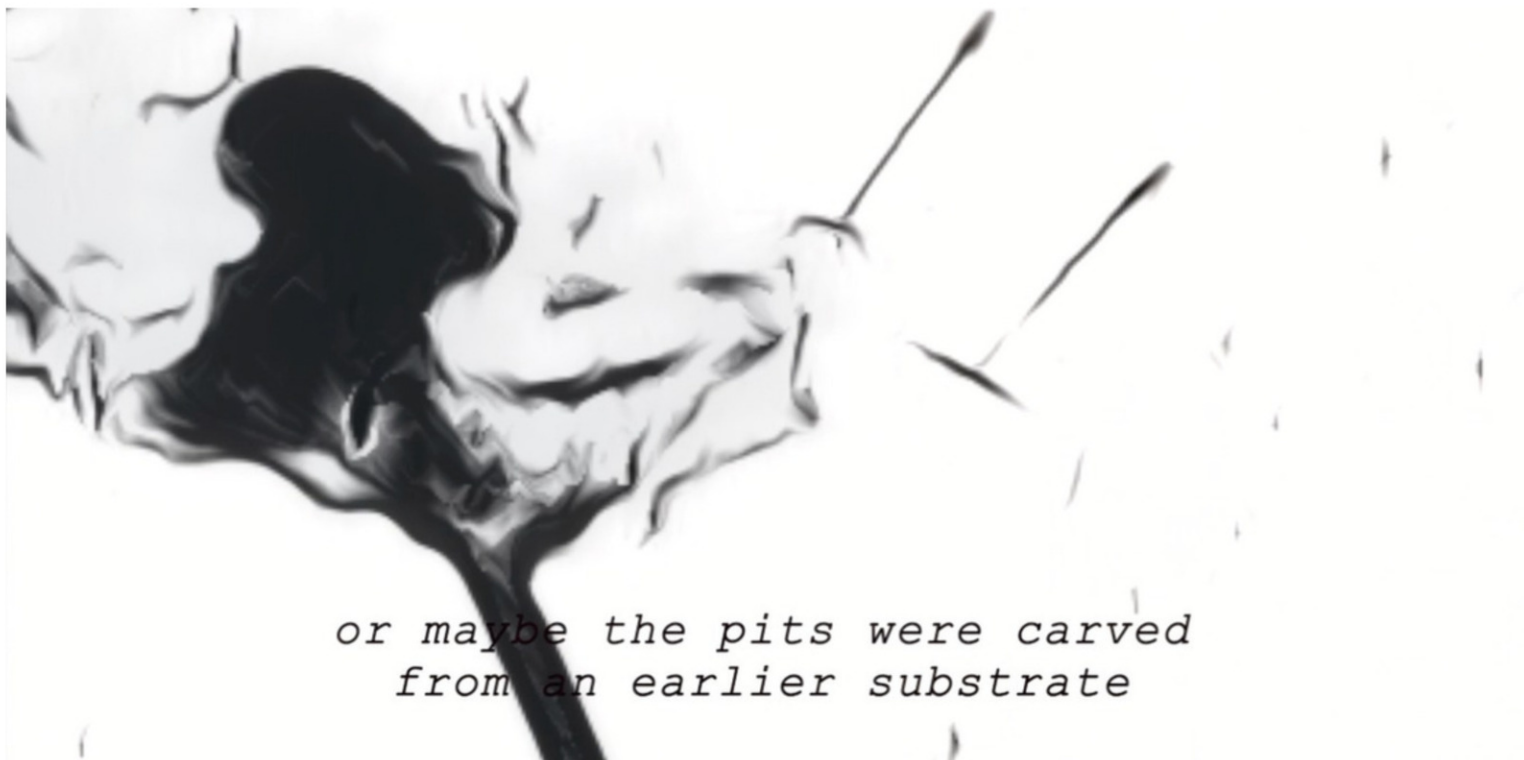

HMA

Drawing from a collective mapping and storytelling exercise initiated during my presentation at a study day at Constant, Brussels, 2025. Later connected to scales of compacity.

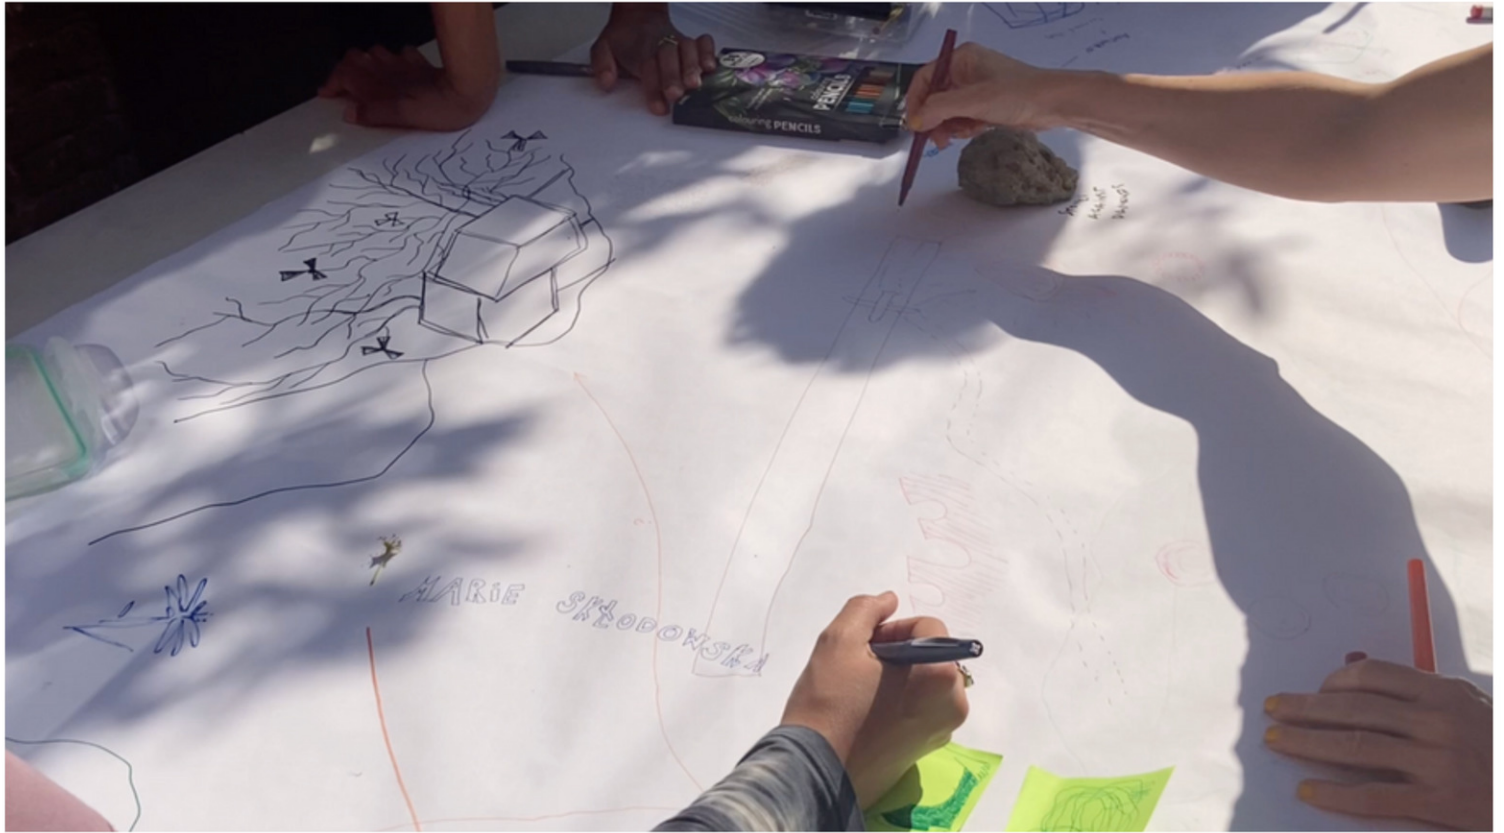

Film, 5'59", 2025

Presented at Volxem 25 and Level 5 Homescreeen, Brussels, 2025.

Waste is the Space

HMA — Study day at Constant, Brussels, 2025

Presentation of the Hoge Bergen site through projection, narration and sound, followed by a collective mapping and storytelling exercise based on material samples.

#3 Bergehalde

HMA — Wassergarten, Reden, Germany, 2026

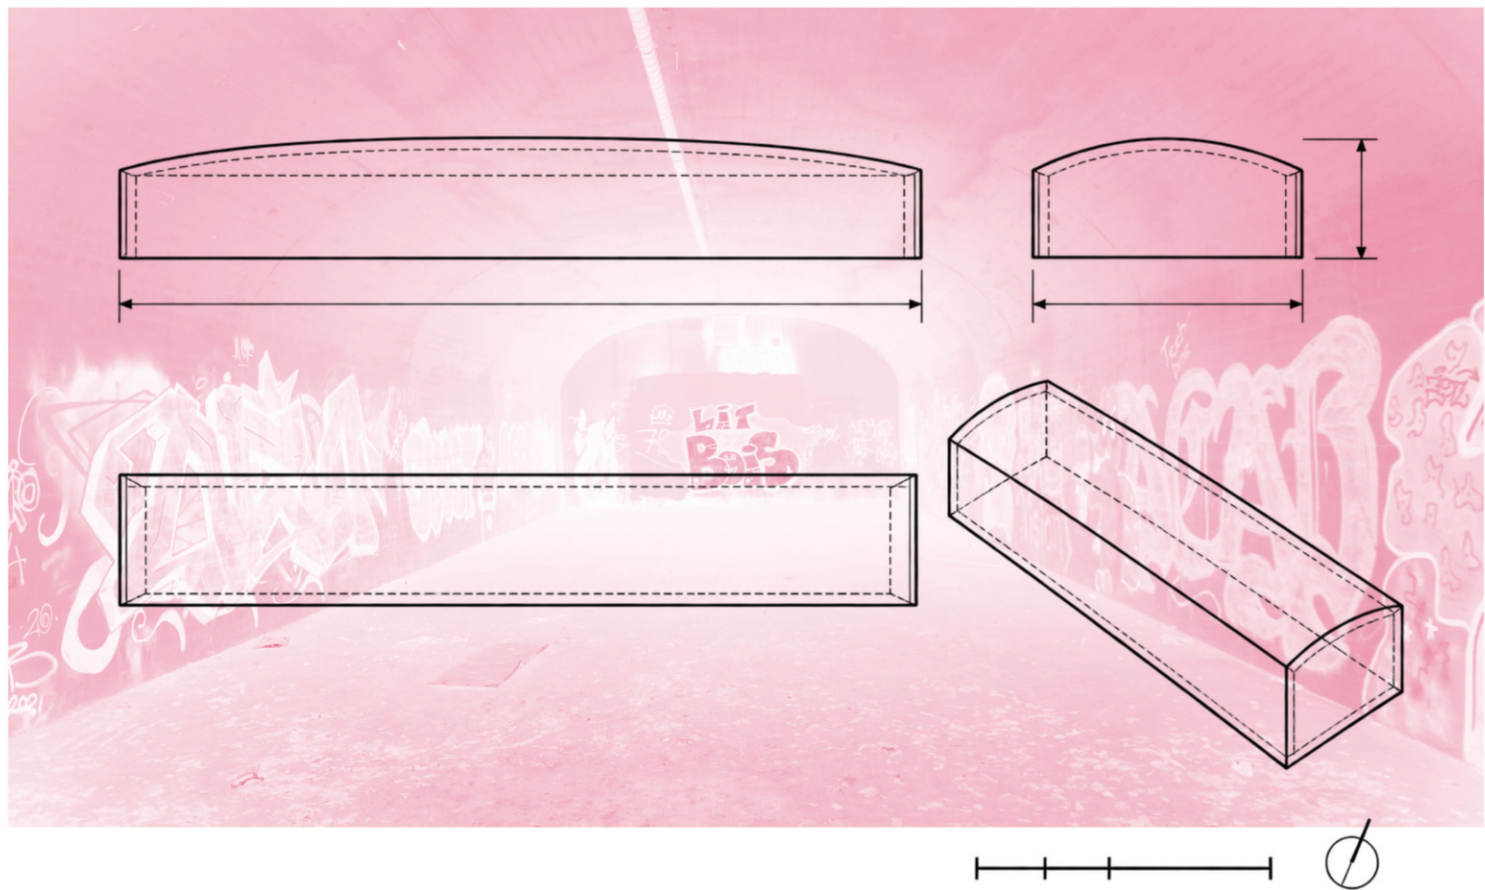

Concept exhibited at Wassergarten NICHES, Reden, 2026. The material presence of the Bergehalde is brought into relation with the negative spaces of extraction, considering opacity and intimacy as modes of encounter.

#4 Metabolic Sublime

HMA — Ardennes, Belgium. 2026

The High Mountains Archive extends into the Ardennes forest, where geological and living processes intersect with industrial residues and post-military infrastructures. The forest opens a new situated context for the project, continuing its attention to material transformation, opacity and structures of power.

Provisional reconstruction of the interior volume of a former NATO explosives-storage bunker complex in the Ardennes forest, 2026. The estimated volume forms the basis for further translations across scales and materials, and different forms of activation.

La Chasse — Field notes on a missing film

Film, 2'13", 2026

Referencing an earlier film of uncertain status, *La Chasse* unsettles the hunt as a structure of pursuit and capture, while speculating on a form of objectivity that cannot be secured.

Tiny Infiltration

Film, 2'?, 2026 — water infiltration inside the former NATO bunker complex

Part of Moving Assembly, 4 hours performance moving works between storage and display. Level 5 at KOMPLOT, Brussels, 2026.

Objet introuvé

HMA — unrealized proposal / portable dispositif, 2026

Hautes Montagnes — Microinstallation

Sun, construction waste, shadow, evaporated dew on industrial textile, 2026

Wit(h)nessing device — Slate debris wrapped in industrial textiles, 2026.

Down Dwars Delà

Research residency, Bassenge, 2021

During the residency, Audiotour was developed and written as a semi-live performance transmitted via Signal: a walking sound meditation through a former stone quarry.

Unfolding DDD

Exhibition at SEE U, Brussels, 2022

Audiotour was adapted to the SEE U site, a temporary occupation of the former national police headquarters, with an installation of performance debris.
